Multi-Vendor Software

Best choice if you want to open online marketplace

With Multi-Vendor you can build your own eBay, an eCommerce mall, where different sellers offer their products or services in a shared marketplace, and you regulate sellers' activities.

Marketplace out-of-the-box features

- An individual storefront and control panel for each vendor.
- A single marketplace for multiple vendors.
- For customers: products from different vendors are included in one order.
For administrators: division of products by vendors in the order.
- A system of vendor payouts.
- A flexible system of user access permissions for vendors and administrators on different levels.
- Automatic calculation of the shipping cost for each vendor.
- Vendor synchronization via API.

Store management

- User-friendly control panel. Easy-to-use administration interface for content managers and editors.
- Data management on the storefront.
- Mobile app for store management.

Product management

- Flexible data export/import to/from CSV, YML, XML, Excel, CommerceML. Auto creation of categories and subcategories, bulk upload of images and creation of product features.
- RESTful API.
- Bulk product editing.
- Quantity discounts and unique prices by regions.
- Support of all feature types.
- Independent filters for various product categories.
- Customizable product card.

Order management

- Flexible data export/import to/from CSV, YML, XML, Excel, CommerceML. Auto creation of categories and subcategories, bulk upload of images and creation of product features.
- RESTful API.
- Division of orders: the vendor sees only their own orders and customers.
- Access restrictions in the vendor control panel.
- Customizable order statuses. Automated email notifications are sent to customers and managers when the order status changes.

Storefront

- Responsive design and mobile optimization.
- Quick view.
- User profile.
Users can track their orders, view order history, contact store managers, request returns, sign up with social networks.
- Support of multiple languages and currencies.
- Instant and relevant search.

Integrations

- RESTful API.
- 20+ shipping services.
- 60+ payment gateways.
- EPR and CRM systems.

SEO

- Search-friendly URLs.
- Editable meta tags of each page.
- Canonical URL and 301 redirect.
- Google rich snippets.
- Automatic generation of Sitemap.

Marketing

- A/B testing.
- Abandoned cart management.
- Integration with email marketing services.
(MailChimp, MadMimi, Unisender, default Newsletters add-on)
- Widget mode.
Allows to embed the online store into the blog, affiliate website, and social networks with just three lines of code.
- Banners.
Can be created and shown on any place across a website without having to involve a programmer or front-end developer.
- Wishlist.
- Clients' reviews and product rating.
- Integration with social networks.
- Comparison list and product combinations.
- Cross-selling.
- Flexible promotion system and loyalty system.
- Reward points and cumulative quantity discounts.
- Promo codes.
- Gift certificates.

Implementing your project

Launch your marketplace in just 2 months — just add the required features to the Multi-Vendor toolkit. You'll save up thousands of dollars on the content management system.

Get to know how much your marketplace will cost you.
